

WARM UP YOUR DAY

ENGLISH
2016/17

WARM UP YOUR DAY

Therm-ic has a long history, which began with the invention of heating systems for ski boots. Building on the developments and patented technologies of the last 20 years, our range of products now includes a variety of high-quality solutions in the field of portable heating systems, which are proved to provide warmth.

Therm-ic's products have a variety of benefits, from enhancing human well-being, to significantly increasing an athlete's performance. Moreover, they have a preventive effect as they reduce the risk of injury.

Especially when participating in outdoor winter activities, extreme cold and extreme weather conditions can cause severe discomfort. In the worst case, these extreme circumstances may lead to injuries, frostbites, or cold-related diseases. Our mission is to develop technologies for portable and easy-to-handle heating systems in order to protect the entire body.

The product range includes heatable gloves, soles, socks, as well as drying and re-freshing systems for the daily shoe care. New are non-electronic warming solutions for everyday life, basing on long-term research in insulation and natural heat development. Thus, Therm-ic, the inventor of heating systems for ski boots has now become the warmth specialist for winter sports enthusiasts and everyone who loves the cold season!

POWERLINER

The new PowerLiner fits perfectly in most of the common ski boot shells. The heatable liner is the ideal addition for everybody who already found the right ski boot shell. The control unit is situated directly on the shin what enables easy access also during skiing.

- + Perfect fit for most ski boot shells
- + Easy accessible control unit on the tongue
- + High quality materials, e.g. leather
- + Warmth adjustable in 3 levels
- + Ultralight and imperceptible lithium-ion batteries providing warmth for up to 19 hours
- + Impulse control stimulates blood circulation
- + Easy access to the connecting plug for charging

INSULATIONSOLES

Insulation is already in many fields of life a way to preserve warmth and to avoid cold. Every building today has a good insulation to lower the heating costs. Insulation is also a good way to keep away cold from our feet though. Insoles with special materials, which have an insulating effect, are an obvious and easy solution to avoid frozen toes. These insoles you can wear when doing sports, as well as in everyday life.

We at Therm-ic swear on aluminum as material for excellent insulation. Additionally this material allows a very light construction of the insoles, what highly increases the comfort. Another outstanding and natural material for insulation is getting used in the new Therm-ic soles: Air – we know for decades that layers of air also insulate excellent. On this knowledge are the technologies of our two new insulating Therm-ic soles based.

INSULATION 3D

Anatomically shaped insoles for insulation and warmth. High quality materials provide perfect comfort in the shoes. 3D shape supports blood circulation to keep warm. An additional EVA pad provides cushioning in the heel zone.

WARMINGPADS

Warming pads are perfect heating sources to go: They are odorless, nontoxic, ecofriendly and can be used at all outdoor activities, sports and work. When opening the package the contents react with the oxygen in the air and after a few minutes, it starts heating. The principle bases on purely natural ingredients and so the pads can be disposed of with the normal household waste after using. That is what makes warming pads a low cost alternative to electronic heating systems. Not only for kids and travelers!

POCKETWARMER

The handy PocketWarmers to go are the perfect companion at all outdoor activities. Just open the package and put the pads into the pocket – after a few minutes they spread pleasant warmth and stay warm for up to 8 hours.

The Therm-ic PocketWarmers are packed pairwise and will be delivered in a display box containing 20 pairs.

ART.-NO.
T21-0200-001

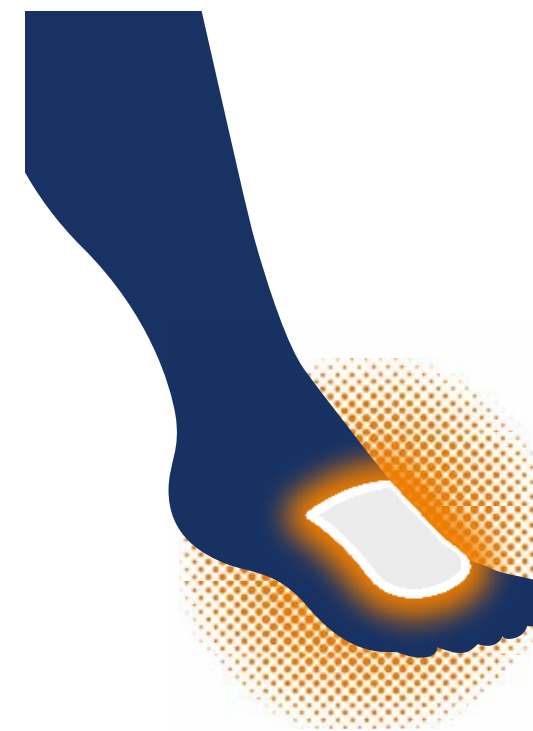

TOEWARMER

The special shaped ToeWarmers fit perfectly on top of the human feet. The warming pads are super thin and can be used at every outdoor activity. Simply open the package und stick the ToeWarmers on the top side of the front part of your feet on the socks. After a short while, the pads start to heat and keep your toes warm up to 6 hours.

The Therm-ic ToeWarmers are packed pairwise and will be delivered in a display box containing 20 pairs.

+ adhesive surface

POWERGLOVES

Our Therm-ic Hand Warming Systems know exactly how to protect you against stiff, frozen fingers. Thanks to their smart interior, Therm-ic PowerGloves release heat from the fingertips and constantly provide your hands with warmth for up to 10 hours even in the freezing cold. The mobility of your fingers is not limited and your grip remains firm.

- + Top-quality materials including leather and PRIMALOFT™ insulation technology
- + Ultralight and imperceptible lithium-ion batteries providing warmth for up to 10 hours
- + Impulse Control stimulates blood circulation in fingers
- + Breathable and waterproof DRYZONE™ membrane
- + Waterproof zippers, drawstring closure, flexible wristband
- + Windshield wipers with soft surface for ski goggles
- + Safety cord

POWERBANKS

Therm-ic PowerBanks are the most convenient way to keep your fingers warm during all winter outdoor activities. But not just that, they also charge your mobile devices and the 3in1 even comes with a powerful flashlight. The 2in1 and 3in1 versions are lightweight, easy-to-use and come with a knitted woolen cover for extra comfort. The multi-functional PowerBanks accompany you everywhere, ensure your hands are warm for up to 5 hours and that your phone is always charged.

- + LED indicates power status
- + Constant warmth on shell surface up to 5 hours
- + USB / micro USB outputs provide charge for devices like smart phones, tablets, etc.
- + Input: microUSB 5V / 1000mAh max. / Output: USB 5V / 1000mAh max.
- + Battery capacity: 3.7V / 2200mAh
- + Surface temperature: 42°C / 107°F
- + incl. wool cover and USB / micro USB cable

POWERSOLES

In cold weather, our bodies withdraw the heat from the extremities first to protect the vital organs located in the center of the body. This already reduces performance by 18 percent at a muscle temperature of about 32°C / 93.2°F. At even lower temperatures, performance may be reduced by up to 50 percent, simultaneously increasing the risk of injury due to less tension in the fibers of a muscle. The heatable Therm-ic soles and batteries are able to reduce this risk.

THERMISOLE PERFORM

- + Anatomic 3D shape for better support
- + Stabilization line for better power distribution
- + Optimal fit
- + High-quality material ensures the perfect temperature for your feet
- + EVA foam design

SMARTPACKS

Warmth and good blood circulation are crucial for outdoor activities. Therm-ic ensures warm feet and thus also provides comfort for the entire body. Heat technologies for warm feet from Therm-ic are easy to handle, small and lightweight. Our Therm-ic Foot Warming Systems with impulse control continuously release heat from the tips of your toes. This type of heat supply increases the mobility and performance of the foot muscles and thus provides more safety.

- + Suitable for use with all ThermicSole
- + Ultralight lithium-ion batteries
- + 3 heat levels, adjustable via control panel
- + Impulse Control stimulates blood circulation
- + Globally applicable charger with charging display and country specific plug
- + Extremely short charging time

SMARTPACK
RC 1600

The strongest: this SmartPack guarantees energy for up to 29 hours. You can regulate the temperature with a remote control.

ART.-NO.
T01-0120-013 (EU, US, UK, AUS)

SMARTPACK
RC 1200

This SmartPack is also equipped with a remote control and suitable for intensive usage: it keeps your feet warm for up to 22 hours.

ART.-NO.

POWERSOCKS

Our Therm-ic PowerSocks combine well proven Therm-ic technologies with the high-tech materials and patented functions of X-SOCKS®. The optimized design and anatomic shape ensure an optimal fit of the sock and guarantee continuously warm feet when participating in outdoor winter activities.

- + Heat Transfer System™ for optimum heat distribution
- + High-tech X-SOCKS® materials
- + Anatomic design for optimal fit
- + XITANIT™ keeps your feet warm
- + Imperceptible heating element attached outside
- + Easy attachment of the battery packs on the sock
- + Optimized integration of heating elements guarantees a long lifetime
- + Washable up to 30°C / 86°F

COOPERATIONS

SIDAS

Therm-ic has been a member of the SIDAS group since 2013. Thanks to its broad range of specialist products in the field of personalized footwear, SIDAS is the world's leading foot expert. Sidas develops and manufactures technologies and solutions adapted to all feet, all sports and for general wear. Satisfying patients, athletes and the general public comes from a combination of care, comfort and well-being. Sidas' mission is to contribute to this goal alongside foot specialists.

SALOMON

The prestigious French sporting goods manufacturer, Salomon, today belongs to the Finnish Amer Sports group. The comfort of integrated boot heating combined with Salomon's optimum fit is appreciated by skiers of all levels, whether hobby skiers or professionals. Therm-ic and Salomon share a long history of collaboration which has seen several hybrid products brought to market. Therm-ic heating elements are integrated into Salomon boots during the manufacturing process. Once charged, the boots are ready to use and able to provide immediate and lasting warmth while skiing.

SIEVI

Sievi is the leading manufacturer of safety and working shoes in northern Europe. The quality standards of Sievi ensure maximum occupational safety and optimum fit and comfort. Through the implementation of these standards, the company aims to produce suitable shoes for diverse requirements that have a positive effect on one's well being and productivity in the workplace. Therm-ic and Sievi have successfully co-operated in the past, when the two brands produced a workbook with integrated heating. The FW 16/17 season sees the realization of another joint project: A new model of a safety working boot with integrated Therm-ic heating, which spends warmth up to 19 hours.

ALIX VON MELLE AND LUIS STITZINGER

Alix von Melle and Luis Stitzinger both come from Germany and have already climbed several mountains higher than eight thousand meters together. They have been a couple for 17 years and will face a lot of challenges in the future, but never without their Therm-ic soles and PowerGloves.

“Dhaulagiri (8167 m), Nepal, last high camp (camp 3, 7250 m), 2:00 am: When we left our protecting tent for our attempt to climb the summit, wrapped up in our down overalls, the thermometer measures 40 degrees Celsius below zero. Merciless the night sky covers us in pitch-black darkness. Brittle snow crunches under our soles and the freezing wind cuts through our down clothes. It is impossible to stay outside for a longer time. We have to leave immediately and move. But first of all we have to put on the crampons. With our thick down mittens it is not possible to perform the necessary dexterous hand movements. However, every conventional full finger glove would be unable to cope with these temperatures. So, what now – surrender, return to the tent? The salvation: our Therm-ic PowerGloves. We can set the temperature to the highest level as long as necessary and reduce it again later. Thus, they keep our fingers warm reliably the whole day, and so do the Therm-ic PowerSoles which warm our feet, even in such absolute extreme conditions!”

SILVIA FURTWÄNGLER

The native German migrated to Norway with her whole family and their sled dogs in 2008. For 29 years she has been participating in sled dog races. 2001 she took part in the Yukon Quest, the most famous sled dog race in North America, for the first time. 2014 she participated in the Volga Quest as the only Western European – 600 kilometers through Russia on the frozen Volga with the sled. Of the 7 participants, she was the only woman and not only won the race, but was actually the only who reached the finish line.

“I am absolutely convinced of the warming technologies of the Austrian brand Therm-ic. Heatable insoles, gloves and socks keep me warm during training and races and support the physical performance“, Silvia writes in her book: “Northwards: A woman with 30 huskys in the wilderness“, which came out in 2015.
